Supplementary Figure 10. The relations between percent of markers used and true- and false-positive rates. We compare DCQ with two alternative deconvolution methods of Lu et al. (2003) and Abbas et al. (2009) (Methods). Shown are two scatter plots comparing the (a) false positive rate and (b) true positive rate (y axis) of the three different methods, while looking at the percent of markers used in each method (x axis).
