Supplementary Figure 9

The figure shows the viability of different breast cancer cell lines (MDA-MB-468, HCC1419, ZR751, HCC2218, HCC38, HS578T, and MDA-MB-468) relative to vehicle treatment. The x-axis represents amlexanox µM, and the y-axis represents viability relative to vehicle. The data points are shown with error bars, indicating the variability of the measurements.
